1 Website localization   ■
John W. Stanley, W. Scott Speights
October 1999 **Proceedings of the 17th annual international conference on Computer documentation**
Full text available: 📄 pdf(400.23 KB)   Additional Information: full citation, abstract, references, index terms

This paper presents the development of a methodology for presenting websites to an audience culturally different that the ones from which they originate. The process, called website localization, consists of far more than just textual translation of websites. The three-step procedure outlined is the first step in determining more effective techniques for website localization. Included is a case study that highlights the important aspects of localization.

Keywords: Internet, Website, Website localization, document localization, localization, translation

2 Critical slicing for software fault localization   ■
Richard A. DeMillo, Hsin Pan, Eugene H. Spafford
May 1996 **ACM SIGSOFT Software Engineering Notes , Proceedings of the 1996 international symposium on Software testing and analysis**, Volume 21 Issue 3
Full text available: 📄 pdf(1.33 MB)   Additional Information: full citation, abstract, references, citings, index terms

Developing effective debugging strategies to guarantee the reliability of software is important. By analyzing the debugging process used by experienced programmers, we have found that four distinct tasks are consistently performed: (1) determining statements involved in program failures, (2) selecting suspicious statements that might contain faults, (3) making hypotheses about suspicious faults (variables and locations), and (4) restoring program state to a specific statement for verification. T ...

Keywords: critical slicing, debugging, dynamic program slicing, failures, fault localization, faults, mutation analysis, static program slicing, testing

3 Machine translation of very close languages   ■
Jan Hajič, Jan Hric, Vladislav Kuboň
April 2000 **Proceedings of the sixth conference on Applied natural language processing**
Full text available: 📄 pdf(539.62 KB)   Additional Information: full citation, abstract, references

Using examples of the transfer-based MT system between Czech and Russian RUSLAN and the word-for-word MT system with morphological disambiguation between Czech and Slovak

1 RFC3536: Terminology Used in Internationalization in the IETF   ■
P. Hoffman
May 2003 rfc, RFC Editor

Additional Information: full citation

This document provides a glossary of terms used in the IETF when discussing
internationalization. The purpose is to help frame discussions of internationalization in the
various areas of the IETF and to help introduce the main concepts to IETF participants.

2 RFC3454: Preparation of Internationalized Strings ("stringprep")   ■
P. Hoffman, M. Blanchet
December 2002 rfc, RFC Editor

Additional Information: full citation

This document describes a framework for preparing Unicode text strings in order to increase
the likelihood that string input and string comparison work in ways that make sense for
typical users throughout the world. The stringprep protocol is useful for protocol identifier
values, company and personal names, internationalized domain names, and other text
strings.

3 RFC2070: Internationalization of the Hypertext Markup Language   ■
F. Yergeau, G. Nicol, G. Adams, M. Duerst
January 1997 rfc, RFC Editor

Additional Information: full citation

The Hypertext Markup Language (HTML) is a markup language used to create hypertext
documents that are platform independent. Initially, the application of HTML on the World
Wide Web was seriously restricted by its reliance on the ISO-8859-1 coded character set,
which is appropriate only for Western European languages. Despite this restriction, HTML
has been widely used with other languages, using other coded character sets or character
encodings, at the expense of interoperabil ...

4 RFC3490: Internationalizing Domain Names in Applications (IDNA)   ■
P. Faltstrom, P. Hoffman, A. Costello
March 2003 rfc, RFC Editor

Additional Information: full citation

Until now, there has been no standard method for domain names to use characters outside
the ASCII repertoire. This document defines internationalized domain names (IDNs) and a
mechanism called Internationalizing Domain Names in Applications (IDNA) for handling
them in a standard fashion. IDNs use characters drawn from a large repertoire (Unicode),
